

SUBRAT KUMAR JENA

Hyderabad, Telangana, India | +91 9337681466 | subratjena2911@gmail.com | [LinkedIn](#) | [GitHub](#) | [Medium](#)

SUMMARY

Entry-level analyst candidate with hands-on experience in market-style research, data validation, dashboard reporting and written insight communication. Skilled in Python, SQL, Advanced Excel, Tableau and Power BI, with projects in financial risk, public-data analysis and business reporting. Strong fit for appraisal support, third-party data aggregation, valuation report preparation and organized analysis of real estate market data.

CORE SKILLS

- **Appraisal & Research Support:** market data collection, third-party source validation, research summaries, valuation-support reporting
- **Analytics & Visualization:** Advanced Excel, Pivot Tables, Power BI, Tableau, Streamlit, KPI dashboards, stakeholder reports
- **Programming & Data:** Python, Pandas, NumPy, SQL, Scikit-learn, XGBoost, SHAP, data cleaning, data quality checks
- **Professional Skills:** analytical writing, documentation accuracy, organization, multi-tasking, communication

INTERNSHIP EXPERIENCE

Data Analyst Intern - Central Tool Room & Training Centre (CTTC), Bhubaneswar

(Jun 2024 - Jul 2024)

- Completed hands-on analytics training using Python, SQL, Advanced Excel and Tableau for cleaning, querying and dashboarding structured datasets.
- Built Tableau reports and Excel analysis outputs during practical evaluation, translating raw data into visual summaries for review.
- Applied EDA, validation checks and basic ML workflows to improve reporting accuracy and support structured decision-making.

Tool Design Intern - Tata Sikorsky Aerospace Limited, Hyderabad

(Jun 2022 - May 2023)

- Prepared engineering documentation for aerospace fixture workflows using Siemens NX, CATIA and SigmaNEST in an on-site manufacturing environment.
- Optimized sheet-metal nesting and material usage, **contributing to 15%** reduction in raw material wastage across assigned workflows.
- Coordinated with cross-functional teams to maintain documentation accuracy, timeline discipline and **quality-focused process compliance**.

PROJECTS

Financial Distress Monitoring Dashboard | Python, Polars, DuckDB, XGBoost, Streamlit, SHAP | [GitHub](#)

- Engineered an ETL pipeline for **60GB+ SEC EDGAR datasets**, running **5x faster** than spreadsheet workflows and **reducing manual reporting effort by ~70%**.
- Delivered an interactive risk dashboard tracking **10+ distress indicators** with **SHAP explainability** for non-technical stakeholder review.
- **Achieved 93% overall accuracy**, weighted **F1 0.94**; minority-class (distressed) **recall 0.87 on a imbalanced dataset** with SHAP explainability for stakeholder review.

Global Water Vulnerability & Infrastructure Risk Dashboard | Tableau, Public Data | [Tableau](#)

- Engineered a cross-source data integration **combining WRI Aqueduct and WHO/UNICEF** records across **180+ countries and 24 years** (2000–2024), building a unified analysis dataset without any pre-cleaned master source.
- Designed **4 Tableau dashboard views** covering global vulnerability mapping, stress-access quadrant analysis, and regional comparison charting to surface multi-dimensional water risk patterns **across 180+ country records**.
- Concluded that national **wealth does not guarantee water security**: **\$7 trillion+ GDP** economies (India, Indonesia, Mexico) remain highly vulnerable, while Africa's **46-point access deficit** versus Europe marks the greatest infrastructure investment opportunity globally.

Credit Risk Analytics Pipeline | Python, CatBoost, Scikit-learn, XGBoost | [GitHub](#)

- Resolved a pre-split oversampling leakage issue and **benchmarked 11 model configurations** across **100 random states**, with Tuned CatBoost selected as champion model **at 86.18% leakage-proof accuracy** (stable & explainable, GridSearchCV)
- Reduced QA overhead by **60%** through reusable validation checks, documented preprocessing decisions and GridSearchCV-based tuning.
- Achieved minority-class (rejected loan) **F1 0.71** and approved-class **F1 0.90 post-leakage fix**; selected **CatBoost** as champion over higher-accuracy **GaussianNB (87.80%)** prioritizing stability and explainability on unseen data over peak accuracy.

EDUCATION

- B.Tech, CSE (AI), Gandhi Institute For Technology, Bhubaneswar | **CGPA: 7.9**

(Expected Graduation: Jun 2026)

- **Relevant Coursework:** Machine Learning, Database Management, Statistics & Probability, Data Mining

- Post Graduate Program in Data Science & AI, Imarticus Learning Pvt. Ltd. , Hyderabad

(Currently Pursuing)

- **Relevant Coursework:** Emphasis on end-to-end analytics pipeline design, KPI dashboard reporting, and stakeholder-facing data communication across Python, SQL, Excel, Tableau, and Power BI.

CERTIFICATIONS & ACHIEVEMENTS

- [Google Data Analytics](#) | [Tableau Business Intelligence Analyst \(Salesforce\)](#) | [HackerRank SQL Intermediate](#) | [LeetCode SQL 50](#)
- [ET GenAI Hackathon 2026 \(Semi-Finalist\)](#) : Built Veri-Vigil AI, a Chrome Extension misinformation detector using LLaMA 3.1, Groq, and Fast API; selected among top teams nationally out of hundreds of submissions.
- Won a Cash Prize at [Trithon 2023](#) for exceptional problem-solving and technical collaboration skills.
- Secured a **Top 5% Merit rank** (800 out of 16,000+ candidates) in **OJEE 2023**.
- Presented E-Waste upcycling research on [Biodegradable 3D Printing Filaments](#) at RAECC-2025 National Conference.
